HG stove glass cleaner

- removes soot, grease and tar

HG stove glass cleaner is a foam cleaner that easily removes soot, grease and tar from glass windows in stoves and hearths. It is also suitable for removing minor soot deposits from bricks and mantelpieces.

Directions for use: The temperature of the surface to be treated should be cold, but certainly no more than lukewarm. Press the nozzle at the front side and turn a quarter. Spray *HG stove glass cleaner* onto the surface and leave the foam to work for 3-5 minutes before wiping off with a wet sponge. Repeat the treatment on persistent marks. Turn the nozzle a quarter backwards after use (blocking position). **Now immediately rinse the nozzle using hot tap water**, e.g. by running the water through the air holes at the side of the foam pipe. This will ensure that the nozzle continues to work well next time you use the bottle.

Attention: Transport and store the bottle upright. Do not use on marble and other chalky natural stone, untreated aluminium and plastic surfaces. Protect the surrounding area. Avoid the liquid running onto other surfaces.

Medical personnel can request the data sheet via +31 36 54 94 777

The consumer's information sheet can be obtained via www.HG.eu

contains a.o.:

anionic and non-ionic surfactants, phosphonates < 5%
